

Hurricane Ian Situation Report for Oct 1, 2022 at 16:00

Data last updated on Oct 2, 2022 at 19:00

01 Disaster

02 Movement

03 Vulnerability

Summary

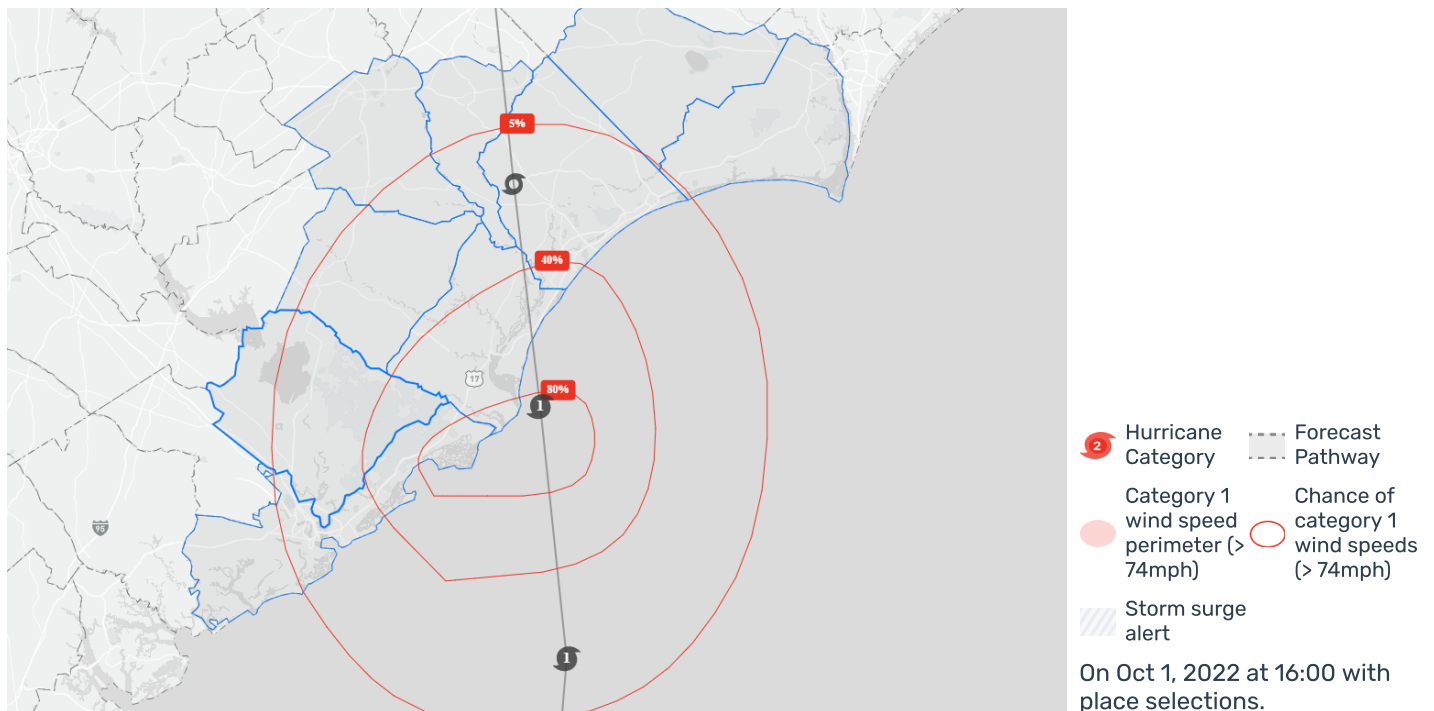

This report summarizes population movements and vulnerability indicators for coastal South Carolina in the aftermath of the landfall of Hurricane Ian.

The greatest decreases in population occurred in the counties of Horry and Brunswick, to the north of Charleston. These counties saw consistent day-over-day declines of 13% to 14% as compared to 5% to 6% in the more southern counties of Charleston and Georgetown. The counties just inland from these coastal areas generally saw either no change or slight increases in population, which reflects the relatively short average distances traveled by evacuees from Horry and Brunswick.

The population of Horry, Brunswick, and Georgetown are in general more vulnerable to disaster impacts than Charleston with numbers of residents over age 65 ranging as high as 31% and poverty rates up to 16%, as compared with 16% elderly and 12% poverty rates in Charleston.
